PLASTICS

## Plastic packaging for industrial use and distribution

ANL Plastics develops plastic packaging by means of thermoforming. The company does this for industrial as well as consumer applications.

Our packaging at the same time ensures the protection of our products as well as optimal branding, while also featuring the key functional and informational characteristics.

## ANL Plastics develops the following for you

### ✓ Blister Packaging

Consumer packaging for the automobile, electronics, communication, toy, cosmetics, and healthcare industries. The packaging, with a high level of transparency and entirely aligned to your branding, is truly a display that optimally brings your product into focus. Also for anti-theft packaging.

### ✓ Contract Packers

Packaging concepts customised for the repackaging from bulk to small numbers of blisters for the packaging of promotional offers or consumer packaging tailored to your brand.

### ✓ Shock-Resistant Packaging

Your product remains intact thanks to thermoforming packaging that can absorb the full impact of a difficult fall. This is worthy alternative to foam packaging.

### ✓ Technical Components

Thanks to our many years of experience and expertise, we are also able to provide you with ready-made solutions for the design and manufacturing of thermoforming technical components.

### ✓ Transport packaging

Our multifunctional packaging solutions for the transportation and storage of technical components provide optimal protection throughout the logistics value chain. This for a wide variety of subsectors of the industry. For once-off use or reusable.

### ✓ Packaging for the automotive sector

Our industrial and consumer packaging provide optimal protection, both during transportation as well as at the point of sale.

## Bespoke packaging

Your packaging is developed and manufactured completely in-house by ANL Plastics, and entirely customised to your desires and needs:

- Perfect balance between product protection and product image.
- Your packaging is developed entirely as per your brand and product positioning
- For once-off use or reusable
- Also from a technical perspective, we ensure that the packaging integrates perfectly into your manufacturing process
- Creative design, professional finishing
- The entire development and manufacturing process takes place in house at ANL Plastics, and is carried out by our own employees:
  - ✓ design of the packaging concept
  - ✓ design and manufacturing of the synthetic matrix
  - ✓ extrusion of the packaging film
  - ✓ thermoforming of your packaging

# Partnering with ANL Plastics, the obvious choice

For more than half a century now, ANL Plastics has been developing and producing plastic containers that meet the increasing expectations and demands of consumers as well as manufacturers. Our customized solutions enable you to deliver your final product in perfect condition to your end customer or consumer in a package that meets the highest standards in terms of product protection, design, quality, durability.

- ✓ Co-creation: we develop your packaging in partnership with you, from A tot Z, and in-house
- ✓ Our R&D department closely follows the latest trends in packaging and technology
- ✓ A 'dedicated team' of our employees is at your disposal, also after the development and manufacturing of your product packaging

## ANL Plastics, are close to the customer, all over Europe

ISO 9001  
BUREAU VERITAS  
Certification

ISO 14001  
BUREAU VERITAS  
Certification

### 3 manufacturing facilities in Europe:

- ✓ Wellen (HQ, Belgium)
- ✓ Cahors (France)
- ✓ Dąbrowa Górnicza (Poland)

This allows us not only to supply all over Europe in a fast and logistically efficient manner, but we can also offer our customers guaranteed manufacturing capacity. Each production mould can actually be used in every one of the 3 locations.

ANL plastics continually invests in new, innovative concepts and state-of-the-art technology and machines.
